| Tree structure conforms to specification |  |  |  |
| Tree is correct representation of the specific problem |  |  |  |
| Tree is complete (or reasonably so) |  |  |  |
|  |  | There is specifically no totals of these columns. |  |

The following questions are informed (not dictated) by the table above. These answers dictate the mark, not the table above.

## Notes:

Column "0..4"
$0=$ not done, left out, or dead wrong
1 = as prose, not well described, or a bad idea
2 = as prose, nominally correct
3 = includes logic statement, some errors or misunderstandings
4 = brilliant
There MUST be some $\geq 2$ 's in this column in order to get a "C"
Column " $\{\boldsymbol{\sim}, \boldsymbol{x}, ?\}$ " Expectations are that all or at least most of these are $\boldsymbol{V}$
A "C" minimum on all problems in the exam is required to get a " $C$ " on the exam as the exam as a whole.
